The new edition of Bruce Wingerd's The Human Body: Concepts of Anatomy and Physiology helps encourage learning through concept building, and is truly written with the student in mind. Learning Concepts divide each chapter into easily absorbed subunits of information, making learning more achievable. Since students in a one-semester course may have little experience with biological and chemical concepts, giving them tools such as "concept statements," "concept check" questions, and a "concept block study sheet" at the end of each chapter help them relate complex ideas to simple everyday events. The book also has a companion Student Notebook and Study Guide (available separately) that reinvents the traditional study guide by giving students a tool to help grasp information in class and then reinforce learning outside of class. With additional, powerful options like PrepU and the ADAM Interactive Anatomy Online Student Lab Activity Guide, students have access to learning activities to help them study, understand, and retain critical course information.

In 1979, Dr. Allan Ronald, a specialist in infectious diseases from Canada, and Dr. Herbert Nsanze, head of medical microbiology at University of Nairobi, met through the World Health Organization. Ronald had just completed a successful project that cured a chancroid (genital ulcer) epidemic in Winnipeg and Nsanze asked him to come to Kenya to help with Kenya's "sexual diseases problem." That initial invitation led to a groundbreaking international scientific collaboration that would uncover critical pieces in the complex puzzle that became today's HIV/AIDS pandemic. In Piecing the Puzzle, journalist and documentary filmmaker Larry Krotz chronicles the fascinating history of the pioneering Kenyan, Canadian, Belgian, and American research team that uncovered HIV/AIDS in Kenya, their scientific breakthroughs and setbacks, and their exceptional thirty-year relationship that began a new era of global health collaboration.
